ASIANZU BENJAMIN CHRIS

Data Analyst • Healthcare Data • Business Intelligence

+256 780 165 621 • b3ntana@gmail.com • Kampala, Uganda (Open to Remote)

Portfolio: chris-asianzu.github.io • GitHub: github.com/chris-asianzu • LinkedIn: linkedin.com/in/chris-asianzu-9b52a538b

PROFESSIONAL SUMMARY

Data Analyst with hands-on experience building end-to-end analytics systems across e-commerce, healthcare, and retail sectors. Delivered a live health records data system deployed at Maracha Hospital (West Nile, Uganda) through Muni Labs. Proven ability to translate raw data into executive-ready insights using Python, SQL, and Power BI. Microsoft Certified Data Analyst Associate. Open to full-time remote roles in data analytics, business intelligence, or health informatics.

CORE COMPETENCIES

Languages & Tools: Python (pandas, numpy, matplotlib, seaborn), R (ggplot2, tidyverse), SQL (PostgreSQL, MySQL), Excel

Visualization: Power BI (DAX, data modeling, KPI dashboards), ggplot2, matplotlib

Analytics: Cohort analysis, RFM segmentation, churn modeling, funnel analysis, CLV, demand forecasting

Data Engineering: ETL pipelines, SQLAlchemy, database design, Git/GitHub, Jupyter Notebooks

Domain Expertise: Healthcare informatics, e-commerce analytics, marketing analytics, retail inventory

Soft Skills: Data storytelling, executive reporting, curriculum design, stakeholder communication

PROFESSIONAL EXPERIENCE

Data Analyst & IT Officer | Muni Labs, West Nile, Uganda *2023 – Present*

- Led data analysis and system development for the Maracha Hospital Data Science Project — a live health records system deployed at St. Joseph's Hospital, Maracha, improving patient data management in a rural healthcare setting.
- Conducted infrastructure assessment, gap analysis, and technical recommendations (server specs, LAN architecture) that enabled multi-user real-time system deployment.
- Designed and delivered a 12-week Introduction to Data Analysis course (Excel + R) for the Graduate Studies Academy, training students in data cleaning, EDA, statistical modeling, and capstone projects.
- Provided ongoing IT support including web development, software solutions, and data systems for NGO operations.

Course Instructor – Python & Programming | ReedInc Org, West Nile, Uganda *Feb 2024*

- Developed and delivered a beginner Python programming curriculum covering fundamentals, algorithmic thinking, and applied problem solving.
- Assessed student performance through coding assignments and project presentations in a hands-on learning environment.

WordPress Developer | Freelance *Oct 2022 – Present*

- Designed and developed custom WordPress websites for multiple clients with focus on responsive design and UX.
- Provided ongoing maintenance, security updates, and plugin customization to client specifications.

Biochemistry Teacher | Secondary School, Uganda *2023 – Present*

- Teach O-level and A-level Biology and Chemistry, developing lesson plans and assessments aligned to Uganda National Curriculum.

KEY PROJECTS

E-Commerce Revenue Intelligence System — *Flagship Project*

- Analyzed 98,666 orders across 3 years of Brazilian e-commerce data. Identified 87.7% churn rate with R$1.38M in recoverable revenue.
- Discovered affiliate channel delivers 4x ROI vs social media — recommended 25% budget reallocation. São Paulo identified as driving 42% of total revenue (R$15.8M).
- Delivered full pipeline: Python → PostgreSQL → Power BI dashboard → executive report → board presentation.

Retail Inventory & Sales Optimization

- Analyzed three-branch supermarket chain. Branch C led at $110,569 revenue with highest inventory turnover (5.58x). Modeled reorder thresholds — estimated 9% revenue recovery from preventing F&B stockouts.

Bank Marketing Campaign Performance Analysis

- Analyzed 45,211 customer contacts. Overall conversion 11.7% — but previous converters re-converted at 64.7%. Cellular outperformed telephone by 2.8x. Recommended targeting shift estimated to improve ROI by 20–28%.

Disease Outbreak Risk Prediction System — *Paid Client Project (NDA)*

- Contracted by a regional public health NGO in East Africa to build a predictive analytics system for early outbreak detection across 45 districts.
- Integrated 7 years of multi-source data (180,000+ observations) from district health offices, NASA climate datasets, and World Bank demographic indicators.
- Engineered lag variables linking rainfall patterns to disease cases 4–6 weeks later. Correlation: rainfall vs malaria cases 0.62, temperature anomaly vs outbreak intensity 0.48.
- Built and evaluated logistic regression, random forest, and gradient boosting models. Final Random Forest classifier achieved 84% accuracy, ROC-AUC 0.89, recall 0.81.
- Delivered interactive Power BI dashboard with national risk heatmap, 30-day outbreak probability forecast, and intervention prioritization panel.
- Simulation models estimated 28% potential reduction in malaria cases when early intervention strategies were deployed based on system outputs.
- Technologies: Python, pandas, scikit-learn, SQL, Power BI

EDUCATION

Bachelor of Science in Education (Biology & Chemistry) | Muni University, Arua, Uganda *Feb 2023*

Uganda Advanced Certificate of Education | Our Lady of Africa SS, Mukono *Dec 2017*

CERTIFICATIONS

- Microsoft Certified: Data Analyst Associate (Power BI)
- Career Skills in Data Analytics — LinkedIn Learning
- Data Analysis with Python — freeCodeCamp
- Certified Python Programmer — DataCamp, 2024
- Certified R Programmer — R Foundation, 2022
